Facebook It Plugin Guide

Loading the Plugin

Getting Plugins for your player is easy. If your player is a JW Player 4 or 5, then it will automatically load Plugins from LongTail's servers based on simple settings in your HTML embed code. All you need to do is set your 'plugins' flashvar to include 'fbit-1'.

Click the Examples tab and review the Loading This Plugin example to see how it's done.

Flashvar: plugins = fbit-1

Plugin Configuration

This plugin supports additional configuration options via flashvars. You can read about each of the options you have to choose from below.

Flashvar: dock = true

This plugin uses the dock, so you need to set the dock flashvar to true in order to utilize the plugin.

Flashvar: link = URL

This a built-in player flashvar. Set link to be the URL you want users to post to Facebook.

Flashvar: fbit.link = true

Use this flashvar to set a different URL for your users to post to Facebook.
